NumPy Functions with Examples

np.sum() - Adds all values
np.sum([10,20,30]) = 60

np.std() - Standard deviation
np.std([10,20,30])

np.var() - Variance
np.var([10,20,30])

np.prod() - Product of values
np.prod([2,3,4]) = 24

np.argmax() - Index of largest value
np.argmax([10,50,20]) = 1

np.argmin() - Index of smallest value
np.argmin([10,50,20]) = 0

np.sqrt() - Square root
np.sqrt([4,9,16])

np.abs() - Absolute value
np.abs([-10,20])

np.round() - Round values
np.round(10.567,2)

np.floor() - Round down
np.floor(10.8)

np.ceil() - Round up
np.ceil(10.2)

np.power() - Power
np.power(2,3)=8

np.sort() - Sort array
np.sort([50,10,40])

np.unique() - Unique values
np.unique([10,10,20])

np.where() - Conditional index
np.where([10,20,30]>15)

np.max() - Maximum value
np.max([10,20,30])

np.min() - Minimum value
np.min([10,20,30])

np.mean() - Average value
np.mean([10,20,30])

np.median() - Middle value
np.median([10,20,30])
