Pandas Functions Notes

read_csv() - Read a CSV file

to_csv() - Save DataFrame to CSV

head() - Show first rows

tail() - Show last rows

info() - Display DataFrame info

describe() - Statistical summary

shape - Rows and columns count

columns - Column names

dtypes - Data types

isnull() - Check missing values

dropna() - Remove missing values

fillna() - Fill missing values

duplicated() - Find duplicates

drop_duplicates() - Remove duplicates

sort_values() - Sort data

unique() - Unique values

nunique() - Count unique values

value_counts() - Frequency count

max() - Maximum value

min() - Minimum value

mean() - Average value

median() - Median value

sum() - Sum values

count() - Count values

loc[] - Label-based selection

iloc[] - Position-based selection

rename() - Rename columns

drop() - Delete rows/columns

insert() - Insert column

groupby() - Group data
